

Product Teardown Report

Subspace.money

Product Intern Assignment 2026

Prepared by: Keerthi Priya

Submission Date: 31 May 2026

This report presents a product teardown of Subspace.money based on hands-on exploration of the platform. The analysis covers product positioning, GTM strategy, ideal customer profiles, competitor benchmarking, user experience observations, and five actionable product recommendations supported by screenshots and user journey analysis.

2. Executive Summary

Subspace.money is a consumer platform that combines subscription sharing, equipment rentals, gift cards, wallet functionality, and community-driven interactions within a single ecosystem.

To evaluate the product, I explored the website and core user flows including onboarding, shared subscriptions, wallet, chat, gift cards, and equipment rentals. I also compared parts of the user experience with Splitwise to understand differences in onboarding and user activation.

The analysis identified five key opportunities for improvement:

1. Lack of goal-based onboarding after signup.
2. Limited contextual education around core features.
3. Insufficient trust and safety communication during subscription sharing.
4. Broad product positioning that may dilute the core value proposition.
5. Slower user activation compared to competitor onboarding flows.

The recommendations focus on improving activation, clarity, trust, and product discoverability while preserving the platform's unique multi-service ecosystem.

Figure 1: Subspace.money homepage showcasing its core offerings, including shared subscriptions, gift cards, and equipment rentals.

3. Product Overview

About Subspace.money

Subspace.money is a multi-service consumer platform that enables users to access digital subscriptions, gift cards, and rental equipment through a unified marketplace. The platform focuses on helping users reduce costs through subscription sharing while also providing access to short-term equipment rentals and digital purchasing options.

Unlike traditional subscription platforms, Subspace combines multiple consumer services within a single ecosystem, allowing users to manage subscriptions, purchase gift cards, rent equipment, and interact with other users through community-based features.

Key Features Identified

Based on product exploration and platform usage, the following core offerings were identified:

Shared Subscriptions

Users can join existing subscription groups for services such as YouTube Premium, Netflix, Spotify, and JioHotstar. Subscription costs are shared among multiple users, making premium services more affordable.

Figure 2: Shared subscription marketplace displaying available groups and subscription-sharing opportunities.

Gift Cards

The platform offers discounted gift cards across multiple categories including food, entertainment, shopping, healthcare, fitness, and travel.

Figure 3: Gift card marketplace organized across multiple consumer categories and brands.

Equipment Rentals (Subspace Minutes)

Through the "Subspace Minutes" section, users can rent creator tools, cameras, microphones, gaming accessories, and electronic devices for short durations instead of purchasing them outright.

Figure 4: Equipment rental marketplace featuring creator tools, cameras, microphones, gaming accessories, and electronic equipment available for rent through Subspace Minutes.

During product exploration, the Subspace Minutes section provided access to a dedicated rental marketplace containing multiple categories such as Audio & Video, Cameras, Creator Gear, Electronics, and Adventure Gear. Users can browse rental items, view pricing information, and select products based on their requirements. This feature extends the platform beyond subscription sharing by enabling short-term access to equipment without requiring full ownership, making it particularly useful for creators, students, and occasional users.

Figure 4.A: Subspace Minutes rental marketplace showcasing creator equipment, cameras, microphones, and other rental products available for short-term access.

After selecting a rental item, users are guided through a structured checkout process where they can choose delivery and pickup dates, review pricing details, and schedule the rental period. The checkout experience is relatively straightforward and clearly communicates rental logistics, helping users understand the total cost and rental duration before proceeding with payment.

Figure 4.B: Rental checkout flow showing date selection, pricing breakdown, and delivery scheduling. .

Overall Value Proposition

The platform's value proposition is centered around affordability, accessibility, and convenience by bringing subscriptions, rentals, and digital purchases into a single ecosystem. By combining multiple services under one platform, Subspace aims to provide users with cost-effective access to digital and physical resources.

4. GTM & ICP Analysis

4.1 Go-To-Market (GTM) Analysis

Problem Being Solved

Subspace addresses multiple consumer challenges that are commonly faced by digital-first users.

High Subscription Costs

Many users rely on premium services such as Netflix, Spotify, YouTube Premium, and other digital subscriptions. Purchasing these services individually can be expensive.

Subspace addresses this challenge by enabling users to join shared subscription groups and reduce individual subscription costs.

High Ownership Costs for Equipment

Certain equipment such as cameras, microphones, gaming accessories, and creator tools are expensive to purchase and may only be needed occasionally.

Subspace solves this problem through its rental marketplace, allowing users to access equipment without the need for ownership.

Fragmented Consumer Services

Subscriptions, gift cards, rentals, and related services are often spread across multiple platforms.

Subspace attempts to simplify this experience by offering these services through a single platform.

Figure 5: Subspace.money combines subscriptions, rentals, gift cards, and digital services within a unified consumer platform.

Value Proposition

Subspace enables users to save money through subscription sharing while also providing access to rental equipment and discounted digital products. The platform aims to become a one-stop destination for affordable digital consumption and short-term access to resources.

GTM Strengths

- Strong affordability-driven value proposition.
- Multiple revenue streams through subscriptions, rentals, and gift cards.
- Appeals to price-conscious digital consumers.
- Creates opportunities for recurring engagement across different service categories.
- Expands beyond subscription sharing into adjacent consumer needs.

GTM Challenges

- The platform offers multiple services, making the primary value proposition less obvious for first-time users.
- Users may require additional guidance to understand the platform's full range of offerings.
- Feature discovery depends heavily on exploration rather than guided onboarding.

4.2 Ideal Customer Profile (ICP)

Primary ICP

The primary target audience appears to be digital consumers aged 18–35 who actively use streaming, entertainment, and productivity subscriptions while looking for ways to reduce recurring expenses.

Characteristics

- Regular users of premium digital subscriptions.
- Comfortable with digital payments and online marketplaces.
- Cost-conscious and value-driven.
- Interested in subscription sharing and affordability.

Secondary ICP

Students

Students often rely on premium subscriptions but are highly price-sensitive. Shared subscriptions provide an affordable alternative to individual plans.

Young Professionals

Young professionals use multiple digital services and seek convenience, savings, and simplified access to subscriptions and related products.

Content Creators and Freelancers

The equipment rental marketplace provides creators with temporary access to cameras, microphones, and creator tools without requiring significant upfront investment.

User Segment Mapping

User Segment	Primary Need	Subspace Solution
Students	Affordable premium subscriptions	Shared subscription groups
Young Professionals	Cost savings and convenience	Unified digital market place
Content Creators	Access to equipment without ownership	Equipment rentals
Budget-conscious Consumers	Discounts and savings	Gift cards and shared subscriptions

Key Insight

While Subspace successfully addresses multiple consumer needs, the breadth of its offerings can make it challenging for first-time users to immediately identify the platform's primary value proposition. This observation becomes an important theme throughout the product teardown and is explored further in the feedback sections.

5. Competitor Analysis

Competitor Selected: Splitwise

To better understand Subspace's onboarding and user activation experience, Splitwise was selected as a reference competitor. While the two products serve different primary use cases, both platforms rely on user onboarding, feature discovery, and user activation to drive engagement.

Why Splitwise?

Splitwise is widely used for managing shared expenses among groups, roommates, and travelers. The platform is known for its simple onboarding flow and clear communication of its core value proposition.

Comparison of First-Time User Experience

Category	Subspace.money	Splitwise
Initial Value Proposition	Multiple services presented simultaneously	Single clear use case communicated immediately
Onboarding Experience	No guided onboarding after signup.	Guided onboarding with clear next actions
First User Action	User must explore features	User is prompted to select a use

	independently	case immediately
Feature Discovery	Relies on user exploration	Guided discovery through onboarding
Time to Understand Product	Moderate	Low

Key Observation

During exploration, Splitwise immediately guided users toward a specific action by asking what they wanted to do first, such as managing an apartment or planning a group trip.

In contrast, after signing up for Subspace, users are taken directly to the profile area without receiving guidance on how to start using the platform's core services.

Figure 6: Splitwise onboarding flow guiding users toward a specific use case immediately after signup.

Figure 7: Subspace profile page displayed after signup without a guided onboarding experience.

Key Insight

Splitwise helps users reach their first successful interaction much faster by reducing decision-making and providing immediate direction. Subspace offers multiple valuable services but requires users to discover them independently, which may increase onboarding friction for first-time users.

Competitive Opportunity

Subspace can improve user activation by introducing goal-based onboarding that asks users what they want to achieve:

- Save money on subscriptions
- Rent equipment
- Purchase gift cards
- Explore subscription sharing

This would help users reach the most relevant feature faster and improve feature discovery.

6. Product Feedback & Recommendations

6.1 Lack of Goal-Based Onboarding Delays User Activation

Observed

After signing up and logging into Subspace, users are directed to the profile section. The page primarily contains account management options such as payout methods, addresses, order history, rental history, settings, and support. No onboarding flow, product walkthrough, or "getting started" experience is presented to help first-time users understand the platform's core offerings.

Figure 8: Profile page displayed after login without onboarding guidance or recommended next actions.

Problem

Subspace offers multiple services including subscription sharing, gift cards, rentals, wallet functionality, and chat. New users may not immediately understand where to begin or which feature is most relevant to them.

Without onboarding, users must independently explore the platform, increasing cognitive effort and potentially reducing activation rates. This may result in users leaving before experiencing the platform's value.

Ship Instead

Introduce a goal-based onboarding flow immediately after signup.

Example onboarding options:

- Save money on subscriptions
- Join a subscription group
- Rent equipment
- Buy gift cards
- Explore the marketplace

Based on user selection, the platform should guide users directly to the most relevant experience.

Expected Impact

- Faster user activation
- Improved feature discovery
- Reduced onboarding friction
- Higher conversion from signup to first transaction

6.2 Platform Features Lack Contextual Education

Observed

During exploration, the purpose of certain features such as Wallet and Chat was not immediately clear. While these features are accessible through the navigation menu, there is limited contextual explanation about how users should use them or what benefits they provide.

The wallet page primarily displays balance-related information, while the chat section displays an empty messaging interface without explaining available use cases.

Figure 9: Wallet interface displaying balance and payment options without feature education.

Figure 10: Chat interface presented without guidance regarding its intended use cases.

Problem

When users cannot quickly understand why a feature exists, they are less likely to engage with it.

For first-time users, unclear functionality can create confusion and reduce perceived product value. Features that are not self-explanatory often suffer from lower adoption and engagement.

Ship Instead

Add contextual feature education using:

- Feature tooltips
- Empty-state guidance
- Short onboarding cards
- Use-case examples

Examples:

Wallet

"Use your wallet to manage subscription payments, rentals, and future purchases."

Chat

"Connect with subscription group owners, members, and marketplace participants."

Expected Impact

- Improved feature discoverability
- Increased engagement with wallet and chat features
- Reduced user confusion
- Better understanding of the platform ecosystem.

6.3 Trust Signals Are Not Prominent During Subscription Sharing

Observed

While exploring the YouTube Premium subscription-sharing marketplace, users can view pricing, ratings, active status, available slots, and group owner information. However, important trust-related information such as dispute resolution, refund eligibility, account recovery support, and buyer protection policies are not prominently visible during the decision-making stage.

Figure 11: Subscription-sharing marketplace showing pricing and group information.

Figure 12: Subscription-sharing explanation modal shown separately from the purchase decision flow.

Problem

Subscription sharing requires users to trust unknown group owners and other participants. When trust and safety information is not visible at the moment of purchase, users may hesitate to join groups or abandon the process altogether.

This can directly affect conversion rates and marketplace confidence.

Ship Instead

Introduce visible trust indicators on subscription listings:

- Buyer protection badge
- Refund eligibility information
- Verified group owner status
- Dispute resolution process
- Platform-backed protection messaging

These trust signals should appear directly on listing cards and checkout screens.

Expected Impact

- Increased user confidence
- Higher subscription group conversion rates
- Reduced trust-related hesitation
- Improved marketplace credibility

6.4 Multiple Offerings Dilute the Core Value Proposition

Observed

During exploration, Subspace presented multiple offerings including:

- Shared subscriptions
- Gift cards
- Equipment rentals
- Wallet functionality
- Chat features

Although these services provide value individually, the primary purpose of the platform was not immediately obvious during first use.

Figure 13: Homepage displaying multiple product categories and service offerings.

Figure 14: Rental marketplace integrated within the broader platform ecosystem.

Problem

When a platform communicates multiple value propositions simultaneously, new users may struggle to understand what the product is primarily known for.

This can increase onboarding friction and make marketing messages less effective.

Ship Instead

Establish a clearer primary positioning message.

Example:

"India's marketplace for affordable subscriptions and shared access."

Secondary offerings such as rentals and gift cards can be introduced progressively after users understand the core value proposition.

Expected Impact

- Stronger brand positioning
- Faster user understanding
- Improved acquisition efficiency
- Better feature discoverability

6.5 Subspace Reaches the “Aha Moment” Slower Than Competitors

Observed

During competitor analysis, Splitwise immediately asked users what they wanted to do first, helping them reach value quickly.

Subspace required users to independently explore multiple features before understanding how the platform could benefit them.

Figure 15: Splitwise onboarding directing users toward a clear first action.

Figure 16: Subspace post-login experience requiring users to discover features independently.

Problem

The longer it takes users to experience value, the greater the risk of abandonment.

A delayed "aha moment" can reduce activation rates, engagement, and conversion into paying users.

Ship Instead

Implement a guided activation experience based on user goals.

Examples:

- I want cheaper subscriptions
- I want to rent equipment
- I want discounted gift cards
- I want to explore all services

This reduces exploration effort and helps users experience value faster.

Expected Impact

- Faster activation
- Higher engagement
- Improved retention
- Better onboarding experience

7. Potential Collaborations

Strategic Partnership Opportunities

Netflix

Expand subscription-sharing opportunities and improve user acquisition among streaming consumers.

Spotify

Strengthen the music subscription segment and attract younger users.

Adobe

Create creator-focused bundles combining software subscriptions with rental equipment.

Swiggy

Integrate food-related rewards, gift cards, and subscription benefits.

Zomato

Introduce dining rewards, gift card partnerships, and loyalty campaigns.

Potential collaborations were identified based on Subspace's focus on subscription sharing, consumer savings, and digital marketplace services.

8. Prioritization Matrix

Prioritization Framework

To prioritize recommendations, an Impact vs. Effort framework was used. Recommendations that provide significant user or business value while requiring relatively low implementation effort were given higher priority.

Feedback	Impact	Effort	Priority
Lack of Goal-Based Onboarding Delays User Activation	High	Medium	P1
Trust Signals Are Not Prominent During Subscription Sharing	High	Medium	P1
Multiple Offerings Dilute the Core Value Proposition	High	Medium	P1
Platform Features Lack Contextual Education	Medium	Low	P2
Subspace Reaches the "Aha Moment" Slower Than Competitors	Medium	Medium	P2

Key Takeaway

The highest-priority opportunities focus on activation, trust, and product positioning because improvements in these areas are likely to influence user acquisition, conversion, and retention simultaneously.

9. SWOT Analysis

SWOT Analysis of Subspace.money

Strengths	Weaknesses
Unique combination of subscription sharing, gift cards, and equipment rentals	No onboarding flow for new users
Affordable access to premium subscriptions	Wallet and chat features lack clear explanations
Multiple revenue streams within one ecosystem	Core value proposition is not immediately obvious
Wide range of supported subscription brands	Feature discovery requires significant exploration

Opportunities	Threats
Introduce personalized onboarding journeys	Established competitors in subscription management
Expand partnerships with OTT platforms and creators	User trust concerns in subscription-sharing marketplaces
Improve trust and safety mechanisms	Increasing competition from niche rental and gifting platforms
Enhance AI-driven recommendations and feature education	Regulatory changes affecting subscription-sharing models

Key Insight

Subspace's biggest strength is its ability to combine multiple consumer services within a single platform. However, the same breadth of offerings creates a challenge in communicating the platform's primary value proposition to new users. Improving onboarding, feature discoverability, and positioning can help bridge this gap and improve user activation.

10. Conclusion

This product teardown explored Subspace.money through hands-on usage, competitor benchmarking, and structured product analysis across key pillars including GTM & ICPs, Competitor Analysis, Features & Services, UX, and Potential Collaborations.

The platform demonstrates a unique value proposition by combining subscription sharing, discounted gift cards, equipment rentals, wallet functionality, and community-driven interactions within a single ecosystem. Among these offerings, subscription sharing and equipment rentals emerged as the clearest and most differentiated value propositions.

The analysis identified five key opportunities for improvement: introducing goal-based onboarding, improving contextual feature education, strengthening trust signals within the subscription-sharing marketplace, clarifying the platform's primary value proposition, and accelerating the user activation journey. These recommendations are designed to reduce user confusion, improve feature discovery, increase marketplace trust, and help users reach value more quickly.

From a strategic perspective, Subspace is well-positioned to serve cost-conscious consumers seeking affordable access to digital subscriptions and physical resources. However, simplifying the first-time user experience and strengthening product communication can significantly improve activation, engagement, and conversion rates.

Overall, Subspace presents an innovative approach to subscription management and shared access, with strong potential to expand its market position through focused onboarding, clearer positioning, and enhanced user education.
